Novelties

Our catalog is devoted to extra choice plants, "something a little different" from what the ordinary catalogs contain, common plants can be purchased from hundreds of different sources, but to buy a four year old Yucca in bud, is a little different, and our catalog has a host of plants and seeds fit to grace the finest estate. We import choice seeds from different parts of Europe, and we always welcome novelties of merit.

How to Reach the Nursery

We are just north of the corporate limits of Elmhurst. Drive west on Lake Street from Chicago (Route 5) and Church Road is about three-quarters of a mile west of York Street. Elmhurst is about 15 miles west from Michigan Avenue, Chicago. The North Avenue super-highway will be a short distance south of the Nursery when completed.

OUR SOIL

Our soil is ideal for growing Perennials. It is black loam, the kind that is found in the famed corn belt, and we know of no other soil so adaptable for growing Perennials as our Nursery produces.

VISITORS

Come out any time and inspect our Nursery. There is nothing so satisfactory as to see plants you wish to purchase in full bloom. You know just what you are buying. We sell as many plants in full bloom as we do dormant roots or young plants.

TO GARDEN LOVERS

It is the purpose of this preface to present a few things of interest and benefit for the garden and flower enthusiasts. You will find a large and varied collection of choice plants and seeds which are best for all purposes.

So many of our patrons do not understand hybrids, so that an explanation is necessary to help them keep a better garden. A very simple definition of a hybrid would be that it is a cross between different plants. This definition merely scratches the surface of a very complicated and interesting field of floricultural work. Specialists hybridize to produce better plants, and by selection of the best mutations they produce a new and more choice flower. The knowledge of the strains to be crossed is the secret of the originator. The important thing for the amateur to know is that seeds saved from a hybrid will not come true, but will revert to something like the original strains. In order to be certain that your garden will remain the excellent thing that you have made it and to save your hybrids, cut off the seed pods of the hybrids. If this is not done, the ripe seeds will fall to the ground, probably germinate and the new plants will grow so rapidly that the hybrid may be forced out.

As an example of what has been done with hybrids, a word may be said about the Mrs. Scott Elliott Columbine, which is a great improvement upon the older strains of Aquilegia. The Rocky Mountain strain is a beautiful one, but it does not compare with the Mrs. Scott Elliott. The latter is taller, more beautifully foliaged and bears larger and finer flowers. The colors, in their combinations, far surpass that of other strains, especially because the Mrs. Scott Elliott is bi-colored. The spur of the Rocky Mountain variety is about 1 inch long, that of the Mrs. Scott Elliott is 3 inches. Much more could be said about this variety, but it will suffice to say that this strain is considered the best and finest of all Columbine. This year we will carry a stock of about 84,000 Mrs. Scott Elliott.

The newer varieties of Peonies are notable for their larger flowers, fast colors and better keeping qualities. The stems are stronger and thus more self-supporting. We carry a stock of about 100 varieties of the finer quality Peonies, which rate 8.8 or over.

We have been very successful with the Wrexham Hollyhock-Flowered Delphinium which is a new hybrid that attains a height of seven feet and throws a flower spike of 30 inches. Each flower is nearly 3 inches across, and the colors range from the darkest blue to very light blue. The center of the flower is mauve pink with the central flower parts arranged to give the effect of a large bee busily at work. This is a very new strain, but it has developed a well deserved popularity. Our stock of this particular variety numbers about 100,000 plants.

By selection of plants we have collected a large bed of double pink Pyrethrum. These are true doubles, being miniature curly Chrysanthemum-like flowers. If you desire true doubles, it is best to select such strains as this double in order to be certain that you will have what you want.

Amateur flower growers usually take great pride in gardens they have grown from seeds which they germinated. We have enjoyed a successful year in the sale of seeds, and we have increased our stock which consists of a very select group of fine varieties. Seeds will be found listed according to the hardy annuals for Fall planting and the perennials. On Page 5 some helpful advice will be found concerning the germination of seeds.

We try to give the best service, and our plants are of the best quality. When you visit our nursery you may select your own plants, and the earth is given to you intact about the roots of the plant. You have every assurance of receiving strong, live plants which will grow in your garden. The pictures included in this catalog are reproductions of photographs of our nursery. And now as you turn to the lists, we hope that you will be surprised and pleased with what they contain. You will note that we have a collection of plants which are rare and choice for the home maker who takes pride in arranging his garden.

Yours for a successful year,

H. R. LAWRENCE.

TERMS

Cash must be sent with all orders, do not send stamps.

Plants by Parcel Post, if plants are to be sent Parcel Post, add postage as follows: Single plants, 5c; 3 plants, 10c; 6 plants, 15c; 12 plants, 25c.

All orders sent by Express are sent collect.

We positively will not send live plants C. O. D.

FOREIGN SHIPMENTS

Canadian shipments must send number of permit with order. They may be obtained from Canadian Agricultural Dept. at Ottawa, Ontario; be sure to send the number, and you must present permit at postoffice to get the package.

We cannot be held for delays in the mail or for delays and conditions beyond our control. And after seeds leave our hands we have no control over their germination, and cannot be responsible for the crop.

We send out the finest plants and seeds the world produces.

SEED GERMINATION

Because we have been asked so often about the germination of seeds, we have introduced this new department for the service of our customers. We feel certain that a word or two on the subject will be welcomed by many. There are two methods which we use very successfully; the plants may be raised by sowing seeds in the cold frame in July or August, or by setting out seedlings not later than September 1.

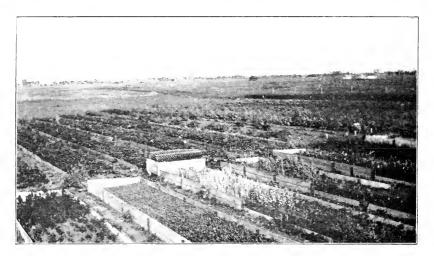

When the first method is used, the seeds are planted in July, August or the early part of September. The bed is spaded and the surface made fine by use of the rake. Then a thin layer of sand and peat moss is spread over the soil. The seeds are scattered in this preparation, and over the seeds a second layer, about three times the thickness of the seeds, of sand peat moss is spread. The seeds are thus sandwiched between two lavers of sand and peat moss so that the danger of drying out is practically eliminated. One thickness of burlap is laid over the top of the bed after the first layer of sand and moss. The glass is laid on the frames and two thicknesses of burlap are placed over the glass. This can be seen in the photograph from our nursery as pictured on the right in cut No. 1. These precautions are taken in order to hold the temperature at about 60 degrees Fahr., which is the best temperature for germinating hardy perennial plant seeds. If all goes well, the seeds will germinate, according to the variety, in from 7 to 30 days. When they have germinated the one layer of burlap inside the frame and covering the germinant seed is removed. After the seedlings have attained a fairly uniform growth, the frames are ventilated, and the seedlings watered carefully in order to harden them to weather conditions. As the plants gain strength, one layer of burlap covering the glass is removed to admit some light, and about three days later the second layer is taken off, but a lath screen is laid over the glass. About fifteen days after germination, the glass is removed, but the lath screens are replaced upon the frames. lath screens may be seen on the right in cut No. 1. The lath screens are kept on the frame until time to transplant the seedlings into the garden. In this region transplanting should be done not later than Sept. 1, in order that the plants may take root and winter over safely. Farther south planting may be done later.

The second method of growing plants which we use is not really seed germination, because we buy seedlings and set them out. If you are uncertain about your ability to grow from seed, you may buy seedlings and plant them not later than September first. When planting is done late in the season, it is best to cover the crowns of the seedlings with a ridge of earth.

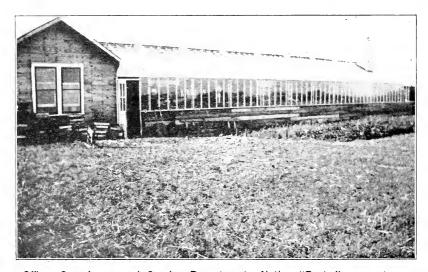

We are stocked with both seeds and young plants so that you may use either method set forth in the foregoing paragraphs, and we can give prompt service in any case. We have grown fine stock by the methods we use and explained to some extent. As an example of the success we have had in seed germination, we refer to the 70,000 Wrexham Delphinium we grew from seed. This represented a 92 per cent germination, which is a high rate for any plant, and especially for Wrexham Delphinium which is a hybrid.

Germinating and Growing Young Plants

PERENNIAL PLANTS

Perennial plants are those which come up year after year, and as the plants thrive and grow into larger clumps, their profusion of bloom for nearly eight months of the year soon repays one for the care lavished on them. Well kept perennial borders and grounds promote real estate values. All our plants are lifted from the soil while you wait or the day we ship. All plants are cold frame or field grown.

	Each	Doz.	100
Aconitum—Monkshood, are a splendid addition to the garden, tall blue spikes, very attractive in July

Sidalcia—Rose Queen, continuous bloomer with nice spikes 3 ft.	.25	2.50	
Statice—Latifolia, large feathery leaves with an immense head of pale blue flowers 18 in. across, long bloomer, 3 ft.	.25	2.50	
Sweet William—Dianthus Parbatus, an old fashioned favorite in the garden	.25	2.50	
the Sweet William and the Carnation, flowers all summer, 80 per cent doubles		2.50 5.00	
Trollius—A Buttercup, hardy and extremely dainty yellow flowers, long bloomer	.25	2.50	
Veronica—Subsisillis, 30-in. spikes of deep blue, a lovely cut flower, long bloomer	.25	2.50	
Wall Flower—An English favorite for the garden, double, tall, branching2 year	.25	2.50	
Yucca—Filamentosa; the Yucca is a specimen plant and should be planted on a terrace or corner in a conspicuous place; they grow into large plants and have large sword-like leaves, with an immense spike of cream colored bells rising to a height of 5 ft., they bloom the fourth year from seed2 year 3 year 4 year1	.75		
Pansies—We have thousands of Pansies; they are the large fluted variety, in all shades, nothing finer		.75	
		Page I	Eleven

HARDY PHLOX

We have an exceptionally fine assortment of hardy Phlox in the new hybrid colors; immense heads, growing from 18 to 24 inches tall. They far excel the old tall straggling Phlox, and it costs no more to grow a good variety than the inferior kinds. We increase our Phlox by root divisions, therefore, it is always true to name. Phlox does not come true from seed. All Phlox seeds revert to the original tall wild Phlox. We have an exceptionally large supply and our prices are extremely low.

2 I	ear
Anton Mercie—Lilac, with white eye	
Bridesmaid—White, with carmine eye	.25
B. Comte—A French purple, 1 year	.25
Eclaireur—Rose carmine	.25
Elizabeth Campbell—Gorgeous salmon	.50
Ethel Pritchard—Soft rose mauve, 1 year	.50
Europa—White, with pink eye	.25
Feuerbrand—Cerise, 1 year	
Hindenburg—Bright red	
Jules Sandeau—Pink (dwarf)	
Miss Lingaard—Early white	.25
Mrs. Jenkins—Excellent white	.25
Mrs. Milly Von Hoboken-Soft pink, extra large petals	.25
Mrs. Ruys—Purest white, 1 year	.50
Rhinelander—Salmon, with red eye	.25
Rhinstrom—Rose pink	.25
R. P. Struthers—Watermelon red	.25
Thor—One of the most beautiful salmon	.25
Von Hockberg—Red overlaid with purple	
Von Heutz—Red salmon	
Wanadis—Lilac, with violet red eye	
W. C. Egan—Delicate lilac	
Mixed all varieties, labels lost	.15

It does not harm Phlox to be moved in bloom. Plants lifted from soil while you wait.

ROSES

These Roses are all blooming size, and field grown, something to be proud of when you buy them, dug fresh while you wait.

TRIS

The new and better varieties of Iris are much sought after for gardens, pools and rockery. Their stately blossoms are about the first taste of Spring, and Nature was very lavish with her rich colorings in the Iris family figures indicate rating with Iris Society, 10 being perfect.

	Each
9.4—Balerine, 48-inch violet blue, falls deeper blue, very fragrant,	
	31.00
7.5—Caprice, standards of reddish purple, falls deeper self-colored	.25
8.6—Edward Michael, deep violet self color, slightly frilled	.75
7.3—Her Majesty, a very tall pink	.25
9.0—Lent A. Williamson, 42-inch, violet, falls royal velvet purple, it	
is considered one of the finest by the Iris Society, is first Iris	
to bloom	.50
Mother of Pearl (not rated), pale blush lavender	.50
8.7—Opera, 28-inch, Bishop red, a wonderful Iris	.50
9.1—Queen Caterina, 40-inch, pale lavender violet	.75
7.4—Queen of May, a light lilac pink	.25
8.3—Seminole, 30-inch, violet rose, falls crimson	.75
8.7—Shekinah, 36-inch, clear soft yellow, deeper yellow center	.75
9.3—Souv. de Mad. Gaudichau, rich deep purple	2.00
8.9—Alcazar, violet and bronze, falls rich crimson, resembles Lent	
A. Williamson	.25
8.6—Isoline, lilac pink	.25
7.8—Joan Arc, white, ruffled with lilac falls	.25
8.1—Juanita, tall, very large leaves, clear blue	.25
7.8—Kochi, claret red, extra fine	.25
7.9—Loreley, yellow, blue falls	.25
8.4—Monsignor, blush lavender, falls violet	.25
7.4—Mad. Chereau, white with border of clear blue	.25
8.8—Pallida Dalmatica, exquisite shade lavender blue	.25
8.3—Prosper Laugier, bronze with falls of velvety ruby purple	.25
8.4—Rhein Nixe, white, falls are purple with blue edge	.25
7.6—Sherwin Wright, all yellow, very fine	.25
7.6—Storm Cloud, a large gray slate blue	.25
9.0—Violacea, very large, tall, violet blue	.25
Siberian Iris—Dark Yale blue, tall slender spikes, fine cut	
flower, excellent for garden or rockery	.25

JAP IRIS

The Japanese Iris are gorgeous, they bloom in July and the flowers are flat and up to 8 in. across; white, purple and gold and mahogany shades. 35c ea. or 3 plants for \$1.00.

(The picture at the left was taken in the Nursery last July.)

PEONIES

Peonies are of the easiest culture and one of the most showy plants in the garden. They are seldom attacked with disease and will bloom the following year after planting, if planted shallow, not more than two inches below the crown. Deep planting prevents bloom. Our peony roots are all clean two year stock, and we never cut flowers from retail roots, we give three to five eyes to a plant. Figures denote rating with the Peony Society, 10 being high, those not rated are new.

We have tried to make it easy to select color, we started with white and shade down through pink to deep red.

9.3—Festiva Maxima, large white,

inner petals tipped red\$1.00	
9.1—E. B. Browning, white	
9.3—John M. Good, not for sale.	
9.1—Frances Williard, cream white	
8.8—W. F. Christman, cream white	
8.3—Perrette, flesh white	
8.9—Jubilee, flesh white	
9.0—Baroness Schroeder, cream white	
Edith Cavel, milk white 5.00	
9.9—LeCygne, milk white	
8.9—Mad. Emile Lemoine	,
8.8—Alsace Loraine, creamy white	
9.8—Kelways Glorious, creamy white	
8.3—LaRosier, yellow white	
9.4—Mad. Jules Dessert, blush white	
8.8—Nymphea (Thurlow), blush white	
8.6—Jessie Shayler, blush cream	
8.3—Henry Avery, cream yellow	
8.3—Isoline, creamy yellow	
8.6—Primivere, good yellow	
8.9 Laurs Dessert, best yellow	
Miss Solway, yellow and pink tri-color	
8.5—Mad. Emil Galle, light pink	
8.7—James Kelway, light pink	
9.1—Cornelia Shayler, flesh pink	
8.7—Elwood Pleas, light pink	
8.5—Exquisite, light pink	

PEONIES

on Circuta in

SEEDS

We have some very choice seeds of both Perennials and Annuals; many people like to germinate their seeds and have the satisfaction of raising their own plants. Below are some very high grade seeds.
Allwoodi—Sweet William, a new strain, that blooms practically all summer, come mostly double, 25 seeds\$.50
Pyrethrum—Double painted Daisy; this is like a small Chrysan- themum when in bloom, and is very choice and an excellent keeper, per pkt
Columbine—Mrs. Scott Elliott hybrid, very large cup and long spurs, in pastel shades, 200 seeds
Delphinium —Wrexham Hollyhock strain, immense spireal spikes of blue and mauve pink, see illustration on front cover, 100 seeds 1.00
Delphinium—Wrexham in separate colors, saved from choice doubles and semi-doubles:Carol Phillips—Dark blue, rose dots, semi-double, 100 seeds
very choice, 300 seeds
ANNUAL SEEDS
Salpiglosis—Glorified petunia, they come in almost every color combination conceivable and are excellent cut flowers, per pkt

A visit to our greenhouse will convince you of the nice quality of our stock.

FERTILIZER

Peat Moss and Vigoro

Are the two Fertilizers we use in the Nursery, and recommend them to our customers. Peat Moss holds the moisture, and keeps the ground mellow.

Vigoro puts the pep into the plants. Directions for using in every package.

VIGORO

100 lb.	bags	\$6.0	0
10 lb.	bags	1.0	0

Consult us and we will be glad to explain how to use these wonderful Fertilizers.

"My garden has never been so beautiful as this year after I applied Vigoro," writes Mrs. W. H. Bateman, 1936 West 102nd Street, Chicago.

"At a recent competition my roses, poppies and pinks, were awarded first prizes."

Clean, dustless, weedless, and *Odor-Iess!* Vigoro is the ideal plant food for lawns, flowers, gardens, shrubbery and trees.

Ask your dealer about this new scientific plant food so easily applied—the most effective and economical you can buy.
